

Winterize Fly Control System

Easiest Way:

Disconnect 1/4" line to nozzles from pump by unscrewing brass nut (1/2" wrench).

Remove return line from drum (if installed)

Pickup entire pump, motor, timer assembly with PVC circle and suction line; store in a warm place for the winter

Easy Way:

Disconnect 1/4" line to nozzles from pump by unscrewing brass nut (1/2" wrench).

Disconnect the two 3/8" lines to drum by unscrewing the two brass nuts (5/8" wrench)

Loosen the silver clamp that holds the brass pump onto the front of the electric motor (use a nut driver or screwdriver)

Remove pump assembly from motor and store in a warm place for winter

Remove intake filter from solution. Tie it up out of the solution or unscrew and keep with pump

Another Way:

Buy a gallon of non-toxic antifreeze (for RV water systems, pink in color), more for larger systems

Pour into a bucket

Slide top of system off drum and place suction line & return line (short one) into the bucket of antifreeze. If you do not put the short line into the bucket, you will get wet!

Open return line if installed

Turn on system and fill with antifreeze. If you have a return line run until pink liquid comes out.

Close return line

Remove intake filter from solution. Tie it up out of the solution or remove

Turn off and unplug system
